

Macro – General Eq. Model

- **Calibrate Model**
 - Look at real instances of life
 - → Simulation should resemble life
 - e.g. traffic jams
 - And then extrapolate
- → For full representation:
 - Needs to be calibrated for all scenarios?
- **Digital Twins**

Map for the Optimization of Time

- → To pump Diesel instead of electricity
 - because it would be quicker
- *Destination Point important*
- *Driven Mindset*

Influencers – Users

- When anxiety? (1–10)
- Data Scientist → How will we gather it?
 - → Into labels info
- → Connect Google Maps with your km count
- *Stations based on their grid (?) *

Petrol Stations (Most Pop.)

- Where they stop
 - Employ people to do trips
 - Anxiety (why)?
 - Long time charging?
 - ? Streamlit App on Cloud
 - → MVP → Explain further steps
-

Main Objective

- Revenue / Profit from EV stations
 - → Joint Venture with EV sellers?
 - → Into best anxiety solver?
 - → Lots of Visualization
 - Analogies (CO₂ eq., # km, hours)
-

Strategy & Business

- Range Anxiety
 - Long Trips
 - *Put Traffic Signs*
 - Surveys
 - → How to measure it
 - *Tell company where in the DATA there are gaps!*
-
